

NSK WHEEL HUB BEARING ASSEMBLIES

Hub unit bearings have been designed to meet increasingly stringent requirements that demand greater fuel efficiency, lower noise, and an extended service life. Along with widespread adoption of vehicle safety systems and antilock braking systems (ABS) to ensure safe maneuverability during braking, there is a growing need for hub units with built in encoders and sensors. NSK guarantees high quality of all of our products by repeated, rigorous bench testing and other checks that take full advantage of our cutting-edge technology, which only an original bearing manufacturer can offer.

DESIGN FEATURES

- › Vehicle specific fit, form and performance
- › Super finished precision matched bearing raceway
- › Advanced multi-lip seal technology
- › Sealed for life design with premium all weather grease
- › Integrated world class magnetic encoder seal

PROVEN BENEFITS

- › Premium OE technology
- › Long life low friction bearing
- › Water and contamination resistant
- › Zero Maintenance
- › Immediate ABS system response

APPLICATIONS

- › Passenger vehicles
- › Light trucks
- › SUVs
- › ATVs

CONDITIONS

CO CONTAMINATION	FE FUEL EFFICIENT	MS MECHANICAL SHOCK
Q LOW NOISE	W WEAR	WT WATER EXPOSURE
