

Ball Bearings - Ultra-Sealed Radial Insert BB - 2..-DLS Series

Ultra-Sealed Radial Insert Ball Bearings from the 2..-DLS series are available with a single- or double-lip seal made from extremely abrasion-resistant material. The seals are also protected by a sheet metal cover. Field test have shown that NSK bearings last several times longer than conventional standard insert bearings.

Product Features

- Heavy dust protection by sheet metal Cover
- Fine pollution protection by abrasion-resistant double-lip seal
- High quantity of grease compared to standard deep groove ball bearings

Benefits

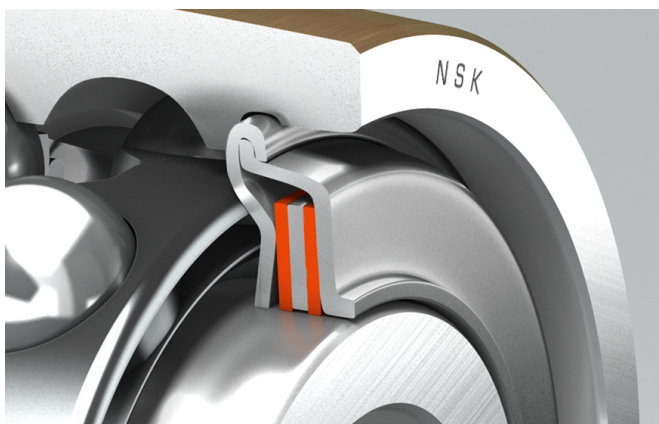

- Multiple lifetimes compared to standard insert bearings at heavy contamination
- Further applications are chain wheels, tensioning roller, cultivation, tillage
- Basic design of 62 deep groove ball bearings with wide inner ring. Therefore no additional space is required

Condition Description

- Arduous Environments
- Contamination
- Lubrication

Industries

- Agriculture
- Cement
- Material Handling
- Paper
- Woodworking

2	02	DL	S
---	----	----	---

Description

2	Series (6)2 with an extended inner ring
02	Bore size
DL	Number of sealing lips (SL = single lip, DL = double lip)
S	Sheet metal cover
