Four Row Cylindrical Roller Bearings with a Stud-Type Cage are designed to prevent cracking of rollers generated by extremely heavy rolling loads.

**Product Features**

- Stud-type cage with solid rollers
- High-load capacity
- Higher rotational accuracy
- NSK's special-engineered steel STF or WTF™ available

**Benefits**

- Solid-type rollers help prevent roller cracking
- Better reliability under extreme operating conditions

**Condition Description**

- High Load

**Industries**

- Steel and Metals
