

Flanged Bearings for Gearboxes

Flanged Bearings with integrated shaft sealing are suited for use in oil-lubricated gearboxes (such as lifts, buses, etc.) With its simplified mounting the bearing unit provides significant reductions in cost against conventional bearings.

Product Features

- Improved seal performance with Rotary shaft seal
- Permanent grease lubrication throughout the life of the bearing
- Absorption of high axial loads in both directions
- Optimized operational clearance

Benefits

- Complete assembly for simple mounting
- Raceway integrated into the flange
- High-performance rotary shaft seal
- Flange tailored to specific customer needs

Condition Description

- Contamination
- High Load
- Lubrication

Industries

- Agriculture
- Fans and Blowers
- Industrial Pumps and Compressors
- Power Transmission
