

## Lubrication Unit - NSK K1

NSK's K1 Lubrication Unit is a uniquely designed system that not only lubricates but also helps minimize contamination. K1 material composition consists of 70% mineral oil and 30% polyolefin resin which ensures long-term, maintenance-free operation even under tough lubrication environments.

### Product Features

- Long-term, maintenance-free operation
- Available in accordance with the FDA
- Effective sealing to eliminate contamination
- Applicable to all the linear guide models

### Benefits

- Reduced cost
- 10,000 km without maintenance
- High performance even in highly contaminated environments
- Available in accordance with the FDA
- High reliability

### Condition Description

- Arduous Environments
- Contamination
- Corrosive Environment

### Industries

- Automotive
- Food and Beverage
- Material Handling
- Packaging
