

Triple-Lip Sealed Inserts

NSK's Triple-Lip Sealed Inserts are ideal for applications where bearings are exposed to heavy contaminants such as dust and water.

Product Features

- Nitrile rubber triple lip bonded to protective pressed steel shield
- Both setscrew and eccentric locking collar insert options available
- Large size range including imperial options
- Interchangeable with standard items

Benefits

- Seal performance increases bearing life
- Extended relubrication intervals-reducing maintenance costs and increasing productivity
- Simple implementation
- Mounting on the shaft with balled setscrew, provides greater resistance to loosening

Condition Description

- Contamination
- Corrosive Environment

Industries

- Chemical and Pharmaceutical
- Construction
- Food and Beverage
